

AmCham Vietnam · Website & Member CRM/AMS

Low-fidelity wireframe concepts · Blue Coral (Powered by ADNS) · for the selection committee

About Blue Coral (Powered by ADNS)

Blue Coral is a full-service digital product agency based in Ho Chi Minh City, Vietnam. We design and build websites, web applications, member platforms and e-commerce systems, and support them end to end with UI/UX design, cloud hosting, IT maintenance and performance marketing.

Our work spans startups to established institutions, with a focus on building things the right way: products that are well-engineered, secure, and that simply work. For AmCham this means a member platform staff and members find effortless, with data ownership and compliance built in from day one.

Purpose of these wireframes. They show **how we understand AmCham's needs** and how the information would be structured for your two user types, not the final look. Colour, typography and high-fidelity visuals are deliberately left out and are produced **after contract, in the design phase (milestone M2)**. The intent here is to prove the solution is on-target, not to commit a visual direction prematurely.

① Member-facing · public website + self-service portal

- Unified homepage for 2 chapters (HCMC + Hanoi)
- Events: discovery, registration & payment
- Member portal: profile, renewal, invoices, events
- Member / company directory (gated, PDPA-aware)
- Mobile-first: the full experience on any phone

② Internal admin / CRM · staff + AI workflow surfaces

- Admin dashboard + AI assistant
- Member 360 record
- AI Workflow 1** · inactive-member re-engagement worklist
- AI Workflow 2** · pre-meeting / renewal briefing
- AI Workflow 3** · event recap & follow-up drafting
- Finance · QuickBooks sync & e-invoice

AI workflow surface

n

 design rationale → AmCham need

What this platform and its AI workflows mean for the chamber's leadership.

The decision in one line: one platform to retain members, grow non-dues revenue and run a lean team, with AmCham owning 100% of its data and code.

For the President / Executive Director

- **Retain members.** The AI agent flags at-risk members early (Workflow 1) so renewals are saved, not lost to silence.
- **Grow non-dues revenue.** Events, sponsorship and upsell briefings (Workflow 2) live in one place; finance reconciles with QuickBooks.
- **Run lean.** Automation lets a small team do more; one platform replaces ChamberMaster, Constant Contact and spreadsheets.
- **Own it, lower the risk.** 100% source-code and data ownership, PDPA by design, no per-member SaaS fees, no vendor lock-in.

For Marketing & Membership

- **Engage members.** Unified, brand-consistent communications across both chapters (replaces Constant Contact).
- **Always-on follow-up.** Event recaps, thank-yous and re-engagement are drafted automatically (Workflows 3 & 1); staff simply approve.
- **Better member experience.** Self-service portal, searchable directory and frictionless event registration.
- **Decide with data.** One member view plus dashboards for renewal, attendance and engagement.

Why Blue Coral

AI-first delivery

100% data & code ownership

PDPA / GDPR by design

In-country team & support

Lower TCO than SaaS (no per-member fees)

Lean, architecture-led delivery

Partnership mindset (barter-friendly)

12-month warranty + SLA

What success looks like (illustrative; concrete targets agreed in discovery)

↑ Renewals

Early at-risk detection saves renewals

Hours saved

Automation frees membership & events staff

~70% lower

Bulk-email cost vs Constant Contact

Mins, not hrs

Briefing & recap prep time

REQUIREMENTS OVERVIEW · A · KEY PROCESS FLOWS

How AmCham's core processes flow through the system, including where the AI agents act.

1 · Membership lifecycle & renewal

Members flagged inactive (no events, no logins) are routed to the re-engagement agent before renewal; on payment a VAT e-invoice is issued and the member returns to Active.

2 · Event, from creation to recap

Attendance feeds the member record; the recap agent drafts the website post, attendee thank-you, no-show follow-up and an internal ROI summary for staff approval.

3 · Pre-meeting / renewal briefing

Conceptual view. The exact technology stack is confirmed in the design phase after contract; AmCham retains 100% data ownership.

4 · System & data (conceptual)

Sensitive member data sits in the AMS core with audit logging (PDPA, Decree 13/2023); the public website is replaceable without touching member data.

5 · Communications (replaces Constant Contact)

Engagement signals (opens, clicks, attendance) flow back into the member record, which is what powers the AI agents above.

DESIGN RATIONALE → AMCHAM NEED

- 1 Two chapters, one brand.** A chapter switcher + per-chapter event/news filtering serves HCMC & Hanoi from a single unified site (RFP: unified branding, 2 chapters).
- 2 Bilingual EN / VI** toggle in the header, content and templates available in both languages.
- 5 "Join / Renew" is the primary CTA** , it routes straight into the self-service membership flow (A3), the chamber's main conversion goal.
- 6 Sponsor visibility** built into the homepage, supports AmCham's sponsorship & advertising revenue.

DESIGN RATIONALE → AMCHAM NEED

- 1 Filter by chapter, type, month + calendar view, both chapters' programmes in one place.
- 3 Self-registration with group / table-of-10 bookings , matches the chamber's flagship galas & dinners.
- 4 Member vs non-member pricing applied automatically from the member's tier.
- 7 Integrated payment (Stripe / VNPay / Momo) + automatic VAT e-invoice on completion.

DESIGN RATIONALE → AMCHAM NEED

- 5 Self-service renewal & payment** , members renew without staff effort; the renewal due date is front-and-centre (reduces manual chasing).
- 7 Invoice / receipt self-download** (PDF, VAT-compliant), replaces email back-and-forth.
- 8 "Data & privacy" panel** , member self-service data export & consent, supporting PDPA (Decree 13/2023) and GDPR for EU members.

**DESIGN RATIONALE → AMCHAM NEED**

- 1 Searchable & filterable** by industry, chapter and tier · the networking value members pay for.
- 8 Gated to logged-in members** · protects member PII; visibility honours each member's consent settings (PDPA).

Members do everything from their phone: renew, register, pay, show a ticket and find each other.

WHY THIS MATTERS

- 1 Frictionless for members.** Renew, register, pay and get a QR ticket in a few taps, no desktop needed.
- 2 Self-service anywhere.** Membership status, invoices and event history are always in their pocket.
- 3 Networking on the go.** The gated member directory is fully usable on mobile.

One build adapts from desktop to phone; reminders link members straight to the right mobile page.

Same site, every screen

Desktop · 3 columns

Tablet · 2 columns

Phone · 1 column

Mobile-first build, target Lighthouse mobile 90+, works in any browser with nothing to install, and WCAG 2.1 AA accessible.

From reminder to action, on the phone

Notification

1-tap renewal

Convenience built in

- Register, pay and get a QR ticket in a few taps.
- View membership, invoices and event history anytime.
- Email / Zalo ZNS / SMS reminders deep-link to the exact page.
- Add to Home Screen (PWA) for an app-like shortcut, no install.
- Optional native app (iOS + Android) on the roadmap when AmCham is ready.

MEMBER-FACING · A DAY IN THE LIFE OF A MEMBER

How the platform, automation and AI agents work together, so members stay engaged with almost no manual staff effort.

Meet **Linh**, office manager at a member company. She never logs a support ticket, never misses an event she wants, and renews on time, because the system meets her where she is.

1

ZALO ZNS · AUTOMATIC

A timely nudge

Monday morning, Linh gets a branded Zalo message: an upcoming HCMC event, and a note that renewal is near.

Behind the scenes: the automation journey fired on her renewal and event triggers (B7).

2

MOBILE WEB

Registers in a few taps

She taps through, picks a table of 10 and pays with VNPay, all on her phone in under a minute.

Behind the scenes: payment captured, VAT e-invoice issued automatically, finance synced to QuickBooks.

3

PORTAL

Instant digital ticket

A QR ticket and confirmation land in her account and inbox right away.

Behind the scenes: ticket generated and stored in her member record; nothing for staff to send.

4

EVENT NIGHT

Checks in within seconds

At the door she shows the QR; a staff member scans it and she is in.

Behind the scenes: attendance recorded straight to her Member 360 timeline (B2).

5

EMAIL · AUTOMATIC

A warm follow-up

Next morning she gets a thank-you with event photos; people who missed it get a friendly note.

Behind the scenes: the event recap agent drafted it, a staff member approved with one click (WF3).

6

AI · AUTOMATIC

Saved before she lapses

Months later, if Linh goes quiet, she gets a personal re-engagement note before her membership ever lapses.

Behind the scenes: the re-engagement agent flagged her early and drafted the outreach (WF1).

Engaged member, on-time renewal, near-zero manual effort, and a lean team that scales with the chamber.

DESIGN RATIONALE → AMCHAM NEED

- 9 Role-based views · Admin / Editor / Membership / Events / Finance each see what they need (least-privilege).
- 8 Audit log of who viewed / edited member PII · PDPA accountability by design.
- 1 Per-chapter scoping with roll-up reporting · staff work their chapter; leadership sees the whole.
- A B C The three agentic workflows are surfaced as concrete daily actions , not buried features · see B3, B4, B5.

Journey canvas

Trigger: renewal due in 30 days

Email: renewal reminder + 1-click pay

Wait 3 days · opened & paid?

Zalo ZNS: branded reminder (if not opened)

Wait 2 days · paid?

SMS: final reminder (if still unpaid)

Goal: renewed → stop, else create staff task

Performance

Sent · Delivered · Opened

Clicked · Converted

Open rate by channel

CHANNEL	OPEN
Email	~ 30%
Zalo ZNS	~ 80%
SMS	~ 95%

Illustrative figures.

Automation workflow · membership renewal (multi-channel)

```
graph LR; A[Renewal due] --> B[Email reminder]; B --> C((Paid?)); C --> D[Zalo ZNS]; D --> E((Paid?)); E --> F[SMS final]; F --> G((Paid?)); G --> H[Renewed · receipt + e-invoice]
```

A payment at any step ends the journey and triggers the receipt + e-invoice. The same engine powers onboarding, event reminders, post-event follow-up and win-back.

WHY THIS MATTERS

- 1 **Omni-channel reach.** Email for detail, Zalo ZNS for high open rates in Vietnam, SMS as the reliable last touch, one journey, no manual chasing.
- 2 **Behaviour-triggered.** Steps branch on opened / clicked / paid, so members only get what is still relevant.
- 3 **Brand-locked & consent-aware.** Templates stay on-brand; only channels the member opted into are used (PDPA).
- 4 **Reusable.** Renewals, onboarding, event reminders, post-event follow-up and win-back run on the same engine.

CONFIDENTIAL · Prepared by Blue Coral (ADNS) for AmCham Vietnam · Not for distribution

B7

PLATFORM CAPABILITY HIGHLIGHTS

Key capabilities in the proposed build that make this more than a website.

Non-dues revenue

Sponsor & advertising module: tiered sponsor profiles, searchable ad inventory and an online RFP form; event sponsorship tracked per member. Turns the platform into a revenue engine, not a cost.

Event operations

QR-code ticketing, a mobile staff check-in app, group and table-of-10 bookings, member vs non-member pricing and capacity control. Built for AmCham's galas and dinners.

World-class public site

SEO-ready architecture (schema.org, sitemap, RankMath), sub-3s load, WCAG 2.1 AA accessibility, and a true EN / VI bilingual multisite for both chapters.

Security & reliability

WAF, 2FA for admins, login lockout, a third-party penetration test before go-live, daily encrypted backups, and an uptime SLA of 99.5%+. 12-month warranty.

Finance, done right

Two-way QuickBooks sync, Vietnam e-invoice (Decree 123), reconciliation and revenue-by-chapter / event reports, and automated renewal billing.

Data ownership & compliance

100% source-code and data ownership transferred to AmCham, PDPA (Decree 13/2023) by design, GDPR alignment, data export / deletion APIs and a full PII audit log.

Grows with you (optional)

A clear roadmap: member mobile app, AI recommendation engine, AI chatbot, executive BI dashboard, member-to-member networking and a job board, added when you are ready.

In one platform

All of the above replaces ChamberMaster, Constant Contact and scattered spreadsheets with a single owned system, maintained by a lean in-country team.

SCOPE, TERMS & CONDITIONS

Please read alongside these wireframes to avoid any misunderstanding.

- **Ideas, refined after discovery.** The screens, workflows and capabilities shown are proposed ideas. The final feature set, scope and costs may be adjusted to AmCham's actual needs after the discovery phase, and are confirmed in the SoW and contract.
- **Conceptual, low-fidelity wireframes.** These screens illustrate information structure and our understanding of requirements only. They are not the final user interface or visual design.
- **Placeholder content.** All names, companies, logos, figures and data shown are illustrative placeholders, not real AmCham data.
- **High-fidelity design follows after contract.** Visual design and a clickable prototype are produced in the design phase and signed off at milestone M2.
- **Not a binding commitment.** This document does not form a contract. Final scope, features, timeline and pricing are governed by the formal quotation, Statement of Work (SoW) and signed contract.

AI / agentic workflows are NOT included in the base implementation cost. Workflows 1, 2 and 3 and the AI assistant shown here illustrate what is possible. They are optional add-ons, scoped and quoted separately (see the "Optional Enhancements" sheet of the quotation). Implementing any AI capability requires a separate scope and quotation.

- **Third-party and usage costs are excluded / pass-through.** AI / LLM API usage, email sending volume, payment gateway fees, e-invoice fees and the QuickBooks subscription are billed by the respective providers and borne by AmCham.
- **Technology stack not locked.** The conceptual architecture may be implemented with different technologies; the final stack is confirmed during design, with AmCham retaining 100% ownership of source code and data.
- **Compliance.** The solution is designed for PDPA (Decree 13/2023) and GDPR alignment; final compliance scope is confirmed in the SoW.
- **Confidentiality.** This document is confidential, prepared by Blue Coral (Powered by ADNS) for AmCham Vietnam's evaluation only, and must not be distributed without consent.

Thank you!

Reach out, we'd love to hear from you.
